RESET OK!

CONNECTON
FAILED!

Note: Instrument cluster on some vehicles will turn off power and then turn on power again while resetting the service interval mileage.

When CONNECTION FAILED appeared on the screen, you can check the following situations:

- Is the Ignition key ON or the Engine running?
- Is the connection with vehicle diagnostic socket correct?
- Is the function on the vehicle not available?
- Is the power reached to the tool at 10.5 to 14.5 volt?
- Is short circuit in the connection cable and the diagnostic adaptor?
- Is the system requested fitted to this vehicle?

Operation steps for testing BMW

Setting up:

Attach the diagnostic adaptor to the tool 15-pin connector, and the plug into the vehicle diagnostic socket properly.

Diagnostic adaptor
